Lateral Closing Wedge High Tibial Osteotomy and Non-customized Total Knee Arthroplasty in a Patient with Achondroplasia. Single-stage Surgical Planning

Published On: October 17, 2025 | Pages: 017 - 021

Author(s): Francisco Antonio Miralles-Muñoz*, Carlos Ferragut-Bria and Julia Amparo Zofío-Bellod

Patients with achondroplasia often experience knee osteoarthritis, which is marked by varus deviation of the tibia, as well as recurvatum, internal tibial torsion, and mediolateral instability of the knee. This presents a challenge for surgeons, as it necessitates meticulous planning of intricate procedures that may need to be carried out in one or multiple surgical s ...
