## The OEIS complex – clinical & radiological evaluation

Published On: November 30, 2021 | Pages: 035 - 037

Author(s): HK Dutta\*, Dhaval D Dhingani, RK Gogoi and Deb K Boruah

The OEIS complex comprises a constellation of complex and severe malformations of the abdominal wall, gastrointestinal and genitourinary tracts, and spinal cord. The malformation results from improper closure of the ventral abdominal wall due to failure of convergence of cephalo-caudal and lateral folding of the embryo during early gestation. The rarity of the conditi ...

## GIANT vesical stone on an intra-uterine dispositive prolapse in vagina complicated with a vesical fistula: Case report and review of literature

Published On: June 12, 2021 | Pages: 025 - 029

Author(s): Avakoudjo Josue Dejinnin Georges, Agounkpe Michel Michael, Byabene Kaduku Gloire À Dieu\*, Yunga Foma Jean De Dieu, Natchagande Gilles, Loko David, Hodonou Fred Detondji Martin, Muhindo Valimungighe Moise, Yevi Ines Dodji Magloire, Sossa Jean and Mukwege Mukengere Denis

Intrauterine device is the commonest method of reversible contraception worldwide. It's trans vesical migration or misplacement is a very rare complication with a high ratio of calculi formation. We present a case of a 39-year old patient with a large vesical stone prolapse in vagina lumen measuring 15.36 cm × 8.87 cm weighing 450 grams on a intra uterine copper contr ...
