Predictors of nephrectomy in high-grade renal trauma patients treated primarily with conservative intent

Published On: February 10, 2024 | Pages: 001 - 004

Author(s): EL-Ouardi Khalid*, Mouslim Othmane, Lakmichi Mohamed Amine, Dahami Zakaria, Moudouni Mohammed Said and Sarf Ismail

Background: For the majority of renal injuries, non-operative management is the standard of care with nephrectomy reserved for those with severe trauma. The aim of our study is to assess the characteristics of perinephric hematoma and other prognostic factors of surgical intervention for high-grade renal trauma independent of AAST OIS. Materials and methods: A total ...

Case report: Conservative management of a blunt trauma to a horseshoe kidney

Published On: June 12, 2024 | Pages: 008 - 011

Author(s): Ross Micciche*, Jeffrey White, Laura Cornwell and Katie L Canalichio

With trauma representing the leading cause of death in children, and renal injuries representing a large proportion of that trauma, understanding the appropriate management of renal injuries is vital to preventing pediatric morbidity and mortality. Cases involving aberrant anatomy are even more crucial to understand as there is less data on appropriate management. Her ...

Mullerianosis of the urinary bladder: A great mimicker

Published On: May 22, 2024 | Pages: 005 - 007

Author(s): Kavita Mardi* and Supriya Verma

Mullerianosis is a rare benign lesion consisting of an admixture of two or more of the following tissues: endometriosis, endocervicosis, and endosalpingiosis. It most commonly affects the urinary bladder and females of reproductive age group. Müllerianosis of the bladder is an extremely rare entity with fewer than 30 cases reported. Herein we report one such rare case ...
