Safe immunosuppression. New tool for personalized immunosuppressant treatment in renal transplantation. A case report

Published On: June 24, 2024 | Pages: 005 - 008

Author(s): Safe immunosuppression. New tool for personalized immunosuppressant treatment in renal transplantation. A case report

Background: The adjustment of immunosuppressive therapy after kidney transplantation (KT) to avoid graft rejection remains an important challenge for clinicians. It is difficult to achieve a good balance between under-immunosuppression (with an increased risk of graft rejection) and over-immunosuppression (with an increased risk of side effects) by only relying on the ...

Acute post-transplant oxalate nephropathy: A case report and review of the literature

Published On: June 05, 2024 | Pages: 001 - 004

Author(s): Daniel Fantus*, Francois Gougeon and Azemi Barama

Calcium oxalate deposition in the kidney allograft remains an underappreciated cause of acute graft dysfunction.

Diagnoses such as acute rejection, infection, hydronephrosis, and fluid collections are more immediately considered in the early post-transplant period. Risk factors include hyperoxaluria due to chronic fat malabsorption (post gastric bypass, inflammatory b ...
